Listing of the Claims

148. (canceled).

49. (previously presented): A method of assembling a motor shaft with a motor component, the method comprising the steps of:

providing a motor shaft having a first end with a first surface geometry comprising a non-circular cross section;

installing a fan impeller onto the motor shaft proximate the first end of the motor shaft;

engaging a shaft extension comprising a first end having a second surface geometry comprising a non-circular cross section with the first surface geometry of the first end of the motor shaft; and

installing a second end of the shaft extension into a lower assembly.

- 50. (previously presented): The method of claim 49, wherein the first surface geometry comprises a hexagonal cross section.
- 51. (previously presented): The method of claim 49, wherein the first surface geometry comprises a square cross section.
- 52. (previously presented): The method of claim 49, wherein the first surface geometry defines a compartment within the motor shaft.

69N

- 53. (previously presented): The method of claim 49, further comprising tightening a retainer onto the first end of the motor shaft and into abutment with the fan impeller.
- 54. (previously presented): The method of claim 53, wherein the retainer comprises a threaded nut.
- 55. (previously presented): The method of claim 49, wherein the lower assembly $\bigcirc \mbox{\ensuremath{\mbox{\mathcal{G}}}} \mbox{\ensuremath{\mbox{\vee}}}$ comprises a pump impeller.
- 56. (previously presented): The method of claim 49, wherein the lower assembly comprises a bearing.
 - 57. (previously presented): A motor assembly, comprising:

a motor shaft having a first end with a first surface geometry comprising a noncircular cross section;

a fan impeller installed on the motor shaft proximate the first end of the motor shaft;
a shaft extension comprising a first end having a second surface geometry comprising
a non-circular cross section coupled to the first surface geometry of the first end of the motor
shaft; and

a lower assembly coupled to the shaft extension.

58. (previously presented): The motor assembly of claim 57, further comprising a first washer disposed on a side of the fan impeller that is away from the first end of the motor

'Appl. No. 09/286,794 Resp. dated Nov. 24, 2003 Reply to Office action of Oct. 23, 2003

shaft and a second washer disposed on a side of the fan impeller that is toward the first end of the motor shaft.

59. (previously presented): The motor assembly of claim 58, further comprising a threaded retainer disposed on the first end of the motor shaft and into abutment with the second washer.

60. (previously presented): The motor assembly of claim 57, wherein the first surface geometry defines a compartment within the motor shaft.

61. (previously presented): The motor assembly of claim 57, wherein the shaft extension comprises a threaded nut rotatably connected thereto, wherein the threaded nut is threaded onto the first end of the motor shaft.

62. (previously presented): A method of assembling a motor shaft with a motor component, the method comprising the steps of:

providing a motor shaft having a first end with a threaded periphery and a first surface geometry comprising a non-circular cross section;

placing a first washer over the first end of the motor shaft and onto the motor shaft; installing a fan impeller over the first end of the motor shaft and onto the motor shaft proximate the first end of the motor shaft and into abutment with the first washer;

placing a second washer over the first end of the motor shaft and onto the motor shaft into abutment with the fan impeller;

installing a threaded nut onto the threaded periphery of the first end of the motor shaft

'Appl. No. 09/286,794 Resp. dated Nov. 24, 2003 Reply to Office action of Oct. 23, 2003

and into abutment with the second washer;

engaging a shaft extension comprising a first end having a second surface geometry comprising a non-circular cross section with the first surface geometry of the first end of the motor shaft; and

installing a second end of the shaft extension into a lower assembly.

- 63. (previously presented): The method of claim 62, wherein the first surface geometry comprises a hexagonal cross section.
- 64. (previously presented): The method of claim 62, wherein the first surface geometry comprises a square cross section.
- 65. (previously presented): The method of claim 62, wherein the first surface geometry defines a compartment within the motor shaft.
- 66. (previously presented): The method of claim 62, wherein the lower assembly comprises a pump impeller.
- 67. (previously presented): The method of claim 62, wherein the lower assembly comprises a bearing.
